

IMPORTANT INFORMATION REGARDING THE ISSUE OF FLU VACCINES 2018/2019

This year there are 3 different types of flu vaccine

- 6mts – 2yrs if “at risk” – Nasal (Fluenz)
- Preschool children (born between 2/7/14 – 1/9/16 - Nasal (Fluenz)
(*Note: School age children will be vaccinated in school*)
- 18yrs – 64yrs “at Risk” patients – Intramuscular (QIV)
- 65yrs + Intramuscular (aTIV) (Fluad)

Due to supply restrictions which are beyond our control we have been asked to prioritise and call **patients who are 75yrs and above first** and organise our clinics accordingly.

Patients aged 65yrs – 74yrs **will** be vaccinated with Fluad **once further stocks are available.** These patients will not be offered an alternative vaccine.

Therefore we are organising our clinics in the following way -

Wednesday 10th October - **Patients over 75yrs**

(2pm – 5pm)

Patients 18yrs – 64yrs “at risk”

Pre-school children

Wednesday 24th October - **Remainder over > 75yrs (allowing for supply)**

(2pm – 5pm)

Patients > 65 yrs – 74 yrs (allowing for supply)

Patients 18yrs – 64yrs “at risk”

Pre-school children who haven’t received a vaccination.

Please be patient with us as will be allocated specific numbers of vaccines in October November and December and will not be issued vaccines in excess of this.

Many thanks for your patience

Dr Stevens and Dr Thompson
